

HELO HNS

- for both domestic and professional use

HELO HNS

FOR BUSY SPAS AND CLUBS

The powerful new Helo HNS steam generators are robustly designed for the tough professional demands of public bathing facilities, hotels and gyms, where steam generators often need to work more or less continuously. The Helo HNS is designed to keep service and maintenance times to a minimum. Operational reliability is assured by the use of the highest quality materials and components, including the stainless steel water tank and the Incolloy 825 heating elements with thermo-fuse.

The Helo HNS comes in a power range from 4.7 to 14 kW, with up to 56 kW available by ganging several generators together. 2 to 4 generators can be controlled by a single CD controller.

TYPE	POWER (kW)	SAUNA SIZE (m ³)	SIZE (mm)
HNS	4.7 - 14	2.5 - 18	520 / 380 / 160

The long-life Incolloy 825 steel heating elements are equipped with a thermofuse to prevent overheating. The elements can also be changed if necessary. Dry running is also prevented if the mains water supply is interrupted. The Helo HNS steam generator has automated filling, flushing and emptying.

The Helo HNS is used with the digital CD controller with temperature control, timer, and controls for a fragrance pump and lighting.
